

Goya

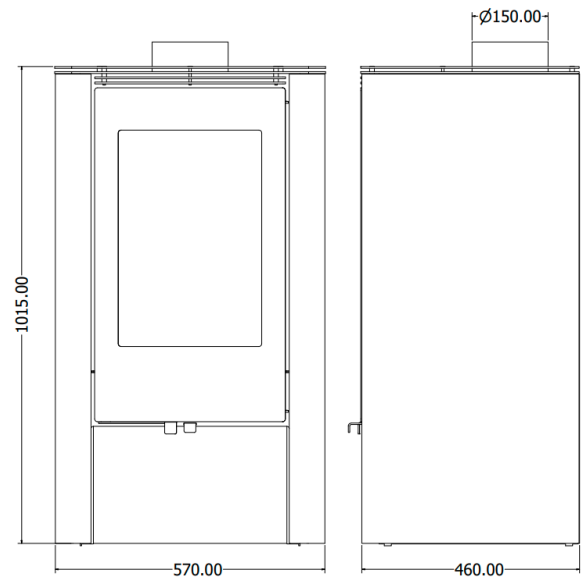

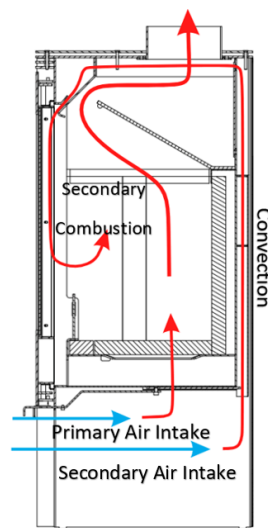

The Goya is meticulously crafted to add warmth and style to contemporary interiors. Its spacious convection compartment amplifies heating capacity, while the elevated fire chamber not only creates an ideal flame display but also serves as a practical wood storage area. Despite its sleek profile, this unit boasts an impressive heat output of up to 14kW.

With its blend of functionality and aesthetics, the Goya offers both comfort and elegance to any living space.

The Goya boasts dual air intake functionality, allowing control over secondary and fixed primary air intake. Heated secondary air, passing over the combustion chamber and the viewing glass, serves as an efficient air-wash system. Additionally, the unit's side panels provide convection heat as air enters from the bottom, rising due to the warm panels and protruding through the top plate into the environment. The presence of a large cavity above the combustion chamber enables rear outlet installation. Moreover, the Goya includes convenient wood storage space.
