

Monet

The Monet exudes elegance with its striking design and harmonious lines. Its impressive fire and well-proportioned form captivates the eye. While powerful enough to effectively heat most rooms, its compact size allows for versatile installation in various settings. With the added convection system and secondary combustion, the Monet delivers both warmth and efficiency. Its heating capacity of up to 14kW creates a cozy ambiance, enticing you to linger a little longer, basking in the mesmerizing dance of flames.

The Monet provides excellent convection heat through the outer chamber of the unit. This air rises and protrudes to the environment through the openings at the top dome. The exterior ashpan can provide plenty of air when opened for first combustion and refueling. The ashpan also features a controllable knob providing primary air to the combustion chamber. The exterior ashpan combined with stone firebricks promotes the use of anthracite. Secondary air is controlled via a control lever below the ash pan. This air gets preheated through vents passing over the combustion chamber. The air flows over the viewing glass, acting as the air-wash. This keeps the glass soot free.
