The Van Gogh Convection Box double sided boasts a dual intake system, featuring a primary and secondary intake. The dual controls, accessible from both sides via protruding levers, ensure efficient airflow regulation. While the front and back vents move in sync and aren't adjustable separately, they work in tandem to optimize combustion. Air enters the unit's outer box at the top, where it's heated by conduction from the combustion chamber. This heated air then passes through the controllable vent over the glass, serving as an air-wash system. Not only does this keep the viewing glass free of soot, but it also delivers preheated air back to the combustion chamber, enhancing overall efficiency.
